

Lang Wang

Toronto, ON | +1 6476758568 | langwang0526@gmail.com

PROFESSIONAL SUMMARY

Highly analytical **Computer Science graduate** with an **MEng in Automation Smart Systems**. Combines rigorous **academic research** experience with industrial **software development** and **testing**. Proven ability to conduct in-depth **technology analyses**, authored academic papers, and translate complex **biomedical** and **engineering data** for diverse stakeholders. Strong self-learning capabilities and dual academic-industrial perspectives to drive strategic innovation in future computing architectures.

EDUCATION

Master of Systems and Technology, Automation Smart Systems (MEng)

Dec 2025

McMaster University

Hamilton, Canada

Honours Bachelor of Applied Science, Major in Computer Science

Jun 2024

McMaster University

Hamilton, Canada

TECHNICAL SKILLS

Programming Language: C, C++, Python, SQL, Java, R, HTML5, Elm, Unity

Technical Framework: MySQL, Git, VS Code, SAS, PowerBI

PROFESSIONAL EXPERIENCE

Software Developer

May - Aug 2026

Beijing Jiahe Hospital

Beijing, China

- Collaborated with a cross-functional team to design, develop, and test robust software applications and websites.
- Optimized existing web performance and system architecture, significantly improving user experience and loading speeds.
- Executed comprehensive software testing to identify bugs and ensure high-quality, stable program releases.

Graduate Research Project – AR Rehabilitation System Developer

Jan 2025 - Jan 2026

McMaster University, Department of Systems and Technology

Hamilton, Canada

- Architected an AR rehabilitation system in Unity with gaze-control and complex spatial kinematics.
- Optimized rendering and latency for AR glasses integration, maintaining a stable 30 FPS.
- Refined UI/UX for real-time clinical testing of 10+ patients, enhancing assessment accuracy.

Research Assistant

May - Jul 2024

Boya Research Institute of Technology

Beijing, China

- Applied machine learning and parametric/non-parametric statistics to interpret complex scientific data.
- Leveraged Python and R to drive data analysis, formulate hypotheses, and present analytical insights.
- Structured complex biomedical datasets (audio, imaging) via robust analysis workflows to accelerate research.

Software Testing Engineer Intern**Jun - Aug 2023***AnHuiYingLianYunXiang**Anhui, China*

- Tested and validated DICOMviewer, ensuring strict compliance with clinical quality standards for medical imaging.
- Designed and executed comprehensive testing protocols across 8 release versions, focusing on MRI and CT imaging standards.
- Led functional verification and performance stress-testing, resolving 70+ critical bugs to reduce time complexity by 10% and enhance rendering stability.

Digital Transformation Process Research Seminar**Jun - Jul 2023***University College London (UK)**Remote*

- Analyzed digital ecosystems and platforms to evaluate technical integration challenges for legacy financial and retail corporations.
- Formulated and presented a comprehensive digital transformation strategy for conventional businesses via detailed reports.
- Authored an accepted paper: "Challenge and Opportunities for Retailers in the Digital Era" for the ICIAAI 2023 Conference.
